

YACHT WHEELS

Connecting You With Your Passion™

TRI-SPOKE COMPOSITE HYBRID WHEEL

Edson's Tri-Spoke Composite Hybrid Wheels are elegant, and lightweight, yet extremely strong - making them ideal for race boats, high-performance cruisers and twin-wheel layouts. The one piece hub/spoke moulding provides a robust connection to the steerer, while retaining its streamlined appearance through the tapered transition to the three sleek spokes. This feature also offers the ability to easily reach through the wheel to access pedestal mounted instruments - free from interference. The Tri-Spoke Wheels features a unique blend of materials to achieve significant weight savings with a contemporary styled wheel. The integral hub and spokes are molded in carbon and are designed for rigidity and strength. A machined stainless hub insert insures a precision fit on the sheel shaft. The rim is available in either lightweight alloy, covered in leather or Pro-Grip™, or teak and holly, hand-made by master craftsmen and shaped for the perfect fit in your hand.
