## MOLDED CARBON FIBRE WHEEL

Edson's Molded Carbon Fibre Wheels are as elegant as they are lightweight. They are as comfortable on the race course as they are in the cockpit of the well-appointed yacht. Constructed in carbon, the material is hand laid into the mold to enhance the look of the woven carbon fabric. Great care in the design stage was taken to ensure excellent ergonomics for the comfort of the helmsman. The rim is just the right shape and diameter, and the angle of the spokes where they join the rim are at a comfortable 45° angle so your wrist is in a comfortable position when steering from the rail. All molded carbon wheels come standard with a clear Awl-Grip® finish, custom Awl-Grip® colors are available. These wheels can also be fitted with Edson wheel clutches. Custom faceplate engraving available.

### Features
